

Patient Name	John Doe	MRN	MRN-00421
Date of Birth	1975-03-12	Exam	Chest X-Ray PA View
Referring Physician	-	Image Quality	Adequate

Model Findings - Probability Scores

Finding	Probability	Confidence	Assessment
Cardiomegaly	79.7%	Moderate	Positive
Atelectasis	49.7%	Low	Negative
Pneumonia	38.5%	Low	Negative
Consolidation	20.4%	Low	Negative
Pleural Effusion	3.6%	Low	Negative

Threshold for positive classification: 50%

Radiological Findings

The chest X-ray PA view is of adequate quality. The model suggests cardiomegaly may be present, with a probability of 0.7973. The model does not identify atelectasis, consolidation, pleural effusion, or pneumonia as they are below the positive threshold. The examination does not provide evidence to support these conditions based on the model output. The radiographic features are otherwise non-specific.

Impression

1. Cardiomegaly
